PDFViewer for Cordova iOS

PDFViewer is meant for one purpose. To view PDFs that are included in the native file structure of your app.

"showPDF" usage is exactly like ChildBrowser's "showWebPage" except you send a bundled pdf file name instead of a url.

Examples:

```
<button onclick="cordova.exec('PDFViewerCommand.showPDF', 'Cordc

<button onclick="cordova.exec('PDFViewerCommand.showPDF', 'readm
```

Add PDFViewerCommand | PDFViewerCommand to Cordova.plist

BackupWebStorage	Boolean	YES
▶ ExternalHosts	Array	(0 items)
▼ Plugins	Dictionary	(18 items)
PDFViewerCommand ⊕ ⊖	String	‡ PDFViewerCommand
Device	String	CDVDevice
Logger	String	CDVLogger
Compass	String	CDVLocation
Accelerometer	String	CDVAccelerometer

NOTES:

- PDFViewer is not meant to replace ChildBrowser.

- PDFViewer only displays PDFs.

TODO:

- Add better AutoResizing support. (Boolean toggle)
- Add Modal display options. (fullscreen, page, form)
- Add Modal transition options. (curl, dissolve, swap)
